

COVER LETTER

24 September 2026

Hiring Manager
VET Charging Station
Phnom Penh, Cambodia

Dear Hiring Manager,

I am writing to apply for the **Project Control Coordinator** position at **VET Charging Station**. I am a Civil Engineer with over eight years of construction experience, including more than six years in project coordination, schedule monitoring, progress reporting, procurement tracking, and project documentation.

In my current position as Senior Project Coordinator at SingBuild Construction, I coordinate project information across managers, consultants, subcontractors, procurement teams, suppliers, and site personnel. I prepare and update schedules, monitor planned versus actual progress, consolidate project information for management reports, identify delays and constraints, and follow up outstanding actions to support timely project delivery.

My previous experience on the National Assembly Building and the Techo International Airport Air Traffic Control Tower further developed my capabilities in milestone tracking, project reporting, stakeholder communication, and maintaining accurate project records. I have completed Microsoft Project and Project Online training, as well as Civil Quantity Surveyor training, which provides a useful foundation for cost awareness and budget-related project control.

I am particularly interested in this opportunity because it combines project coordination, schedule control, reporting, and infrastructure development within the growing electric-vehicle and clean-energy sector. I am based in Phnom Penh and available to work on site.

I would welcome the opportunity to discuss how my project coordination and control experience could contribute to **VET Charging Station**. Thank you for your consideration.

Yours sincerely,

Sim Soklim
